## **1 INTRODUCTION**

### **1.1 Purpose**

This guide is intended to be used by Building Management System (BMS) engineer inside or outside the CIAT Corporation.

It describes in details the AquaCiat CALEO BACnet option.

All information already provided in the product IOM are not available in this document.

### **1.2 Definitions, Abbreviations and acronyms**

Acronym /Abbreviation	Definition
BMS	Building Management System It is a computer-based control system installed in buildings that controls and monitors the building's mechanical and electrical equipment such as ventilation, lighting, power systems, fire systems, and security systems. A BMS consists of software and hardware
BACnet/IP	Building Automation and Controls Network. Open Protocol for the controlled exchange of data between two or more intelligent control devices or BMS. BACnet is used over IP (Internet Protocol).
BTL	BACnet Testing Laboratories
AV	Analog Value
BV	Binary Value
COV	Change of Value

	ECG-UG-17-006	REVISION	DATE	PAGE
	AquaCIAT CALEO - BACnet Option	Rev B	09/02/2018	6 OF 36

## 2. BACNET FOR AQUACIAT CALEO HEAT-PUMP

The AquaCiat CALEO Heat-pump supports the BACnet protocol as a B-ASC BACnet equipment.

In addition, the BACnet stack will implement:

- Optional properties as COV, Intrinsic Reporting properties, Commandable properties on some objects.
- The generation of limited alarm and event notifications and the ability to direct them to recipients,
- The tracking acknowledgments of alarms from human operators
- The Adjustment of alarm parameters
- The Read/Write Property Multiple services

This option can be mounted during manufacturing or on site.

### 2.1 BACnet settings

There is a configuration menu to Enable or Disable BACnet. The password level required to access this configuration is "Advanced User". The button is called "BACnet

Configuration" and the corresponding icon is:

After a power up, if the BACnet "dongle" is detected and BACnet is enabled (default configuration: Enable) then the Heat-pump objects will be created.

Metric units and Imperial units are supported. By default, BACnet data will be in metric units.

The BACnet network and the device object instance (or identifier) can also be modified.

This default instance has been chosen to easily recognize the Heat-pump on a BACnet network. This parameter must be unique on the BACnet network.

It must then be modified if more than one CIAT Chiller is connected to the BACnet network.

By default, the device object instance is **1600001** in order to easily recognize the CIAT chiller. The first two digits are the BACnet CIAT Vendor (16).

	Menu Name	Status	Default	Unit	Note	Menu text description	Low Limit	High Limit
1	bacena	Disable/Enable	1	-		BACnet Enable		
2	bacunit	No/yes	1	-		Metric Unit	-	-
3	network	1 to 9999	1601	-		Network	1	9999
4	ident	0 to 9999999	1600001	-		Identifier	0	9999999
5	bbmd	0 to 2	0	-		BACnet Management Device	0	2

Note: Changing one of these BACnet parameters will cause a reboot of the board after 1 minute.

***Important: Changing IP address from the SETUP menu will require a manual***

	ECG-UG-17-006	REVISION	DATE	PAGE
	AquaCIAT CALEO - BACnet Option	Rev B	09/02/2018	7 OF 36

**reboot or power cycle of the Touch Pilot controller in order to re-build the BACnet stack.**

## 2.2 BACnet chiller objects

The AquaCiat CALEO heat-pump contains up to 600 BACnet objects.

These objects are of ANALOG\_VALUE (AV) or BINARY\_VALUE (BV) type.

There is one Notification Class object for alarm reporting and one Device object (these objects are not in the list below).

Some of AV and BV objects support **Change Of Value** (COV) option and/or **Intrinsic Reporting** Option and/or **Commandable** option.

These objects are pre-defined and cannot be deleted. It is also not possible to add any.

Objects name are built from table name and point name concatenated in order to recognize them easily.

For example:

If the table name is *GENCONF* and the point name is *prio\_cir*, the object name will be *GENCONF\_prio\_cir*.

### 2.2.1 Optionnal properties

For the **Change of Value Option** (COV), the increment value can be configured.

For the **Intrinsic reporting option** (IR), the alarm configuration and the configuration of the equipment to be notified are required to activate the Intrinsic Reporting mechanism.

Objects with **Commandable option** are characterised with the “\_wr” suffix.

If the Local Operating Type is set to Network, then it is possible to control the Unit from the BACnet writing these objects:

- The highest priority value of the commandable object will be copied to the present value of the object using the same name with the “\_rd” suffix.

For example:

*CTRL\_POINT\_wr* highest priority value copied to *CTRL\_POINT\_rd* present value.

If the Local Operating Type is set to Local or Remote, then the Priority value will not be applied. The value determined by the controller will be applied:

- The present value of the object name with the “\_rd” suffix

For the example:

*CTRL\_POINT\_rd* will still reflect the current software value.

- The BACnet priority level corresponds to the override level (1:1). If this BACnet priority level is removed, the priority level immediately below will be applied to the corresponding point (an "Auto" command will be applied first).
- When an override level is applied from the Network, the override level will be the

	ECG-UG-17-006	REVISION	DATE	PAGE
	AquaCIAT CALEO - BACnet Option	Rev B	09/02/2018	8 OF 36

BACnet priority level.

- BACnet priority level 16 (the lowest) has no equivalent and does not correspond to the override. **This priority level should not be used.**

### **2.2.2 Present Value property access**

Writing AV and BV "Present Value" is authorized by the BACnet protocol for all objects. However, the Heat-pump application may or may not authorize the "Present value" writing regarding the "access" object parameter, i.e. Read Only (RO) or Read/Write (RW).

If a "present value" property with an access parameter equal to Read only (RO) is written then the present value will be overwritten by the Heat-pump application with the previous value.

Objects with "present value" in Read Only access are all objects used for Heat-pump configuration and status.

Objects with "present value" in Read/Write access are objects used for setpoint configuration (named with a SETPOINT\_ prefix) and Commandable objects (with a \_wr suffix).

### **2.2.3 Notification class object**

The notification class object can notify up to 5 BACnet devices. These devices are listed in the Recipient List property.

**Important: Enter the IP address of the device to notify.  
Device Name and instance are not yet supported.**

### **2.2.4 Savings**

COV increment property, Intrinsic Reporting properties, Priority values and Notification class properties are saved in files and restored at power up.

	ECG-UG-17-006	REVISION	DATE	PAGE
	AquaCIAT CALEO - BACnet Option	Rev B	09/02/2018	9 OF 36

## 2.3 Objects List

The BACnet objects list includes the list of all objects names with respect to the following parameters:

AV: ANALOG\_VALUE object type

BV: BINARY\_VALUE object type

COV: Change Of Value

IR: Intrinsic Reporting (Alarming)

CMD: Commandable

RO: access to Present Value in Read Only

RW: access to Present Value in Read Write

For BMS, the more often used objects are objects with names starting with "GENUNIT", "TEMP", "PRESSURES", "RUNTIMES" and "SETPOINT" prefixes.

### 2.3.1 BACNet Conf. Objects List

Object Name	Type	Instance	Option	COVInc	PV Access	Description

ALM_DHW_ANTILEG_F	BV	61	IR	0	RO	DHW Antilegionella Setpoint Not Achieved

Note: The configuration parameters of the equipment are available in Read Only access. Setpoint parameters are available in read/Write access

#### Note:

- 1- The ALARMRST\_alarm\_X present values are the « JBus » alarm code of the equipment (see IOM documentation of the equipment),
- 2- The equipment STATUS and ALM parameter are ASCII coded. In order to get them from the BACnet, the « GENUNIT\_STATUS » and « GENUNIT\_ALM » present value are filled with a BACnet code (see below)

#### 2.3.2 BACNet TrendLog Objects List

### **3 BACNET PROTOCOL IMPLEMENTATION CONFORMANCE STATEMENT (PICS)**

---

**Date:** **05.04.2016**  
**Vendor Name:** **CIAT (Vendor ID = 16)**  
**Product Names:** **BACnet for Web panels CIAT Chiller**  
**Product Model Number:** **30**  
**Applications Software Version:** **ECG-SR-20R43011**  
**Firmware Revision:** **3.34**  
**BACnet Protocol Revision:** **1.4 (BACnet ANSI/ASHRAE 135-2008)**

#### **3.1 Product Description:**

This control system is intended to all types of air to water cooled chillers using scroll compressors. It shall operate as either a stand-alone control system or as a part of the Network (CCN or BACnet/IP).

***IMPORTANT: The BACnet stack is not yet certified by BTL***

#### **3.2 BACnet Standardized Device Profile (Annex L):**

- BACnet Operator Workstation (B-OWS)
- BACnet Building Controller (B-BC)
- BACnet Advanced Application Controller (B-AAC)
- BACnet Application Specific Controller (B-ASC)
- BACnet Smart Sensor (B-SS)
- BACnet Smart Actuator (B-SA)
- BACnet Gateway (B-GW)

	ECG-UG-17-006	REVISION	DATE	PAGE
AquaCIAT CALEO - BACnet Option	Rev B		09/02/2018	18 OF 36

### **3.3 BACnet Interoperability Building Blocks Supported (Annex K):**

#### **3.3.1 Data Sharing BIBBs**

Data Sharing Read-Property-A	DS-RP-A
Data Sharing Read-Property-B	DS-RP-B
Data Sharing Read-Property-Multiple-A	DS-RPM-A
Data Sharing Read-Property-Multiple-B	DS-RPM-B
Data Sharing Write-Property-A	DS-WP-A
Data Sharing Write-Property-B	DS-WP-B
Data Sharing Write-Property-Multiple-B	DS-WPM-B
Data Sharing COV-A	DS-COV-A
Data Sharing COV-B	DS-COV-B
Data Sharing COV-Unsolicited-A	DS-COVU-A
Data Sharing COV-Unsolicited-B	DS-COVU-B
Data Sharing COV-Property-B	DS-COVP-B

#### **3.3.2 Alarm / Event BIBBs**

Alarm and Event-Notification Internal-B	AE-N-I-B
Alarm and Event-Notification External-B	AE-N-E-B
Alarm and Event-Acknowledge-B	AE-ACK-B
Alarm and Event-Information-B	AE-INFO-B
Alarm and Event-Alarm Summary-A	AE-ASUM-B
Alarm and Event-Enrollment Summary-B	AE-ESUM-B

#### **3.3.3 Scheduling BIBBs**

Scheduling-Internal-B	SCHED-I-B
Scheduling-External-B	SCHED-E-B
Scheduling-Weekly-B	?
Scheduling-Read Only-B	?

#### **3.3.4 Trending BIBBs**

Trending-Viewing and Modifying Trends Internal-B	T-VMT-I-B
Trending-Viewing and Modifying Trends External-B	T-VMT-E-B
Trending-Automated Trend Retrieval-B	T-ATR-B

#### **3.3.5 Device Management BIBBs**

## 3.6 Device Address Binding :

Is static device binding supported ? (This is currently necessary for two-way communication with MS/TP slaves and certain other devices.)  Yes  No

## 3.7 Data Link Layer Options:

- BACnet IP, (Annex J)
- BACnet IP, (Annex J), Foreign Device
- ISO 8802-3, Ethernet (Clause 7)
- ASTM 878.1, 2.5 Mb. ARCNET (Clause 8)
- ASTM 878.1, RS-485 ARCNET (Clause 8) baud rate(s) \_\_\_\_\_
- MS/TP master (Clause 9), baud rate(s): \_\_\_\_\_
- MS/TP slave (Clause 9), baud rate(s): \_\_\_\_\_
- Point-To-Point, EIA 232 (Clause 10), baud rate(s): max. EIA 232
- Point-To-Point, modem, (Clause 10), baud rate(s): 115200 baud / max. modem
- LonTalk, (Clause 11), medium: \_\_\_\_\_
- Other: \_\_\_\_\_

	ECG-UG-17-006	REVISION	DATE	PAGE
	AquaCIAT CALEO - BACnet Option	Rev B	09/02/2018	32 OF 36

### **3.8 Networking Options:**

- Router, Clause 6 - BACnet/IP-PTP.
  - Annex H, BACnet Tunneling Router over IP
  - BACnet Broadcast Management Device (BBMD)
- Does the BBMD support registrations by Foreign Devices?  Yes  No

### **3.9 Character Sets Supported:**

Indicating support for multiple character sets does not imply that they can all be supported simultaneously.

## 4 HOW TO FIND AND MODIFY THE UNIT IP ADDRESS

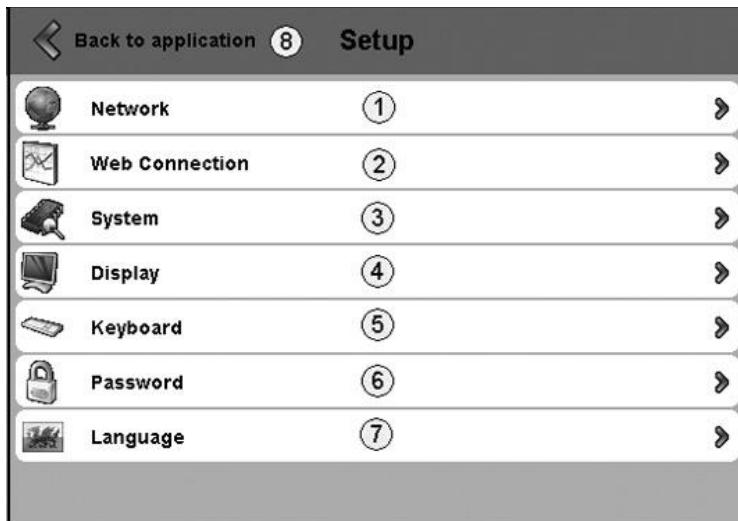

---

The "Setup" display is only possible on the unit touch screen.

To access the main configuration menu, press and hold anywhere on the screen (excluding buttons or text fields) for about 4 seconds. The configuration menu can be accessed at any time. By default, access to the menu is not password-protected.

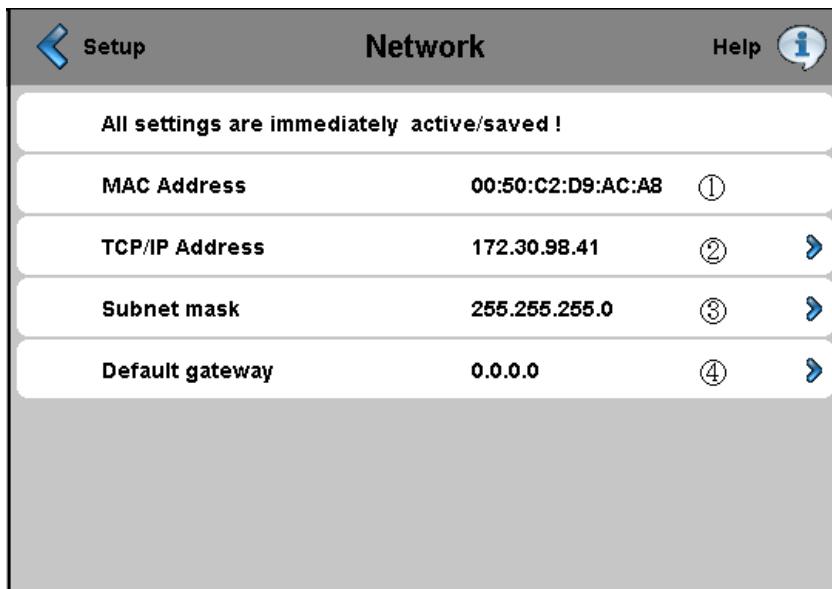

The main configuration screen permits access to the various unit parameters:

1. Network
2. Web connection

	ECG-UG-17-006	REVISION	DATE	PAGE
	AquaCIAT CALEO - BACnet Option	Rev B	09/02/2018	34 OF 36

In the main configuration, menu press on the "Network" field to display the screen below.

1 MAC address (read only)

2 IP address

3 Subnet mask

4 Default gateway

**IMPORTANT: You must request an IP address, the subnet mask and the default gateway from the system administrator before connecting the unit to the local Ethernet network.**

Press the "TCP/IP Address" field.

Enter the new address and validate it by pressing "OK". Proceed in the same way with the other network parameters.

Once all the parameters have been specified, return to the application by pressing the "Back to application" field. The confirmation dialog is displayed. Press "Save" to confirm or "Revert" to discard changes.

## 5 BACNET IP COMMUNICATION PROBLEM

---

The unit does not respond to the Building Manager System (BMS).

### Possible causes :

- The BACnet activation dongle is not detected by the Heat-pump application
- The Ethernet cable is not correctly connected
- Network parameters are not correct (see Network IP/Mask/Gateway configuration)
- There is an IP router between the equipment and the BMS
- BACnet Enable parameter in configuration menu is set to No.

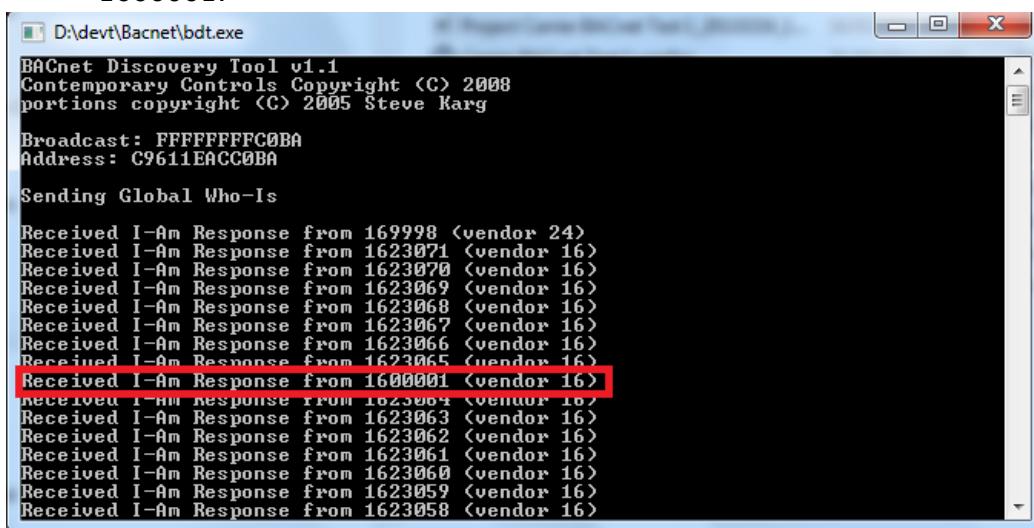

### Checks to be made:

- Open the metal casing of the Touch Pilot controller and verify that the « blue » BACnet dongle is correctly connected.
- On the Ethernet connector, verify that the green LED is ON and Orange LED is blinking.
- Open a command window under Windows (Start, Execute, type "cmd"<Enter>), type the command "ping" followed by the equipment IP address. The equipment must respond.
- Open the Touch Pilot Configuration menu (Advanced User password required) and check BACnet parameters.

In order to verify the connection, you need to have any BDT software (BACnet Discovery Tool) installed. This software will allow you to display the list of devices connected to the BACnet network, including the physical names and instance numbers.

Once the BDT software is installed, perform the following steps:

1. Run the BDT software and execute the "Who Is" command.
2. A list of devices connected to the BACnet network will be displayed.
3. Find the required device according to the BACnet device instance configured, i.e. 1600001.
